

## Petroleum Geology of the Timan-Pechora Province

A major new study based on a comprehensive analysis of the Russian-language and International literature

**Blackbourn Geoconsulting's** new study examines the petroleum geology and hydrocarbon resources of the Timan-Pechora province in Northern Russia.

The main basins to be covered include:

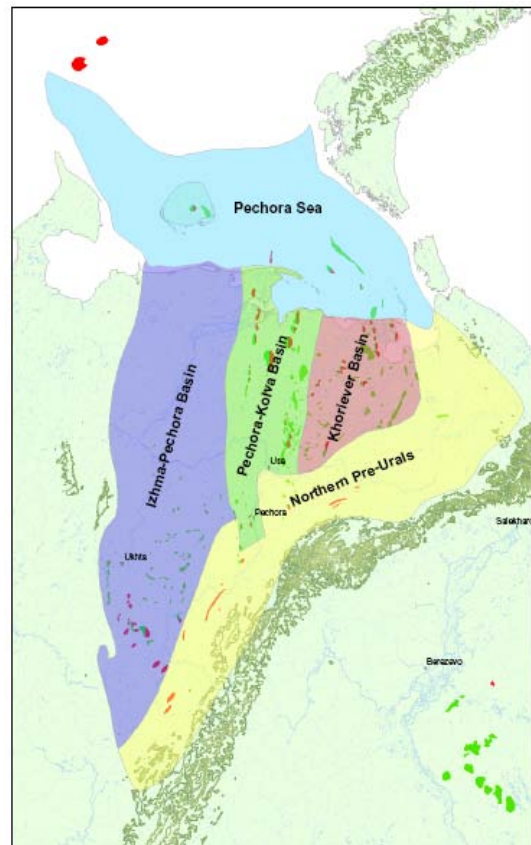

- Pechora-Kolva Basin
- Izhma-Pechora Basin
- Khoreiver Basin
- Northern Pre-Urals
- Pechora Sea

The report will contain descriptions of the geological history and tectonics of the area, basin development, palaeogeography, stratigraphy, known and prospective reservoirs, source rocks and seals, an assessment of the main play fairways, and risked yet-to-find hydrocarbon reserves.

Based extensively on material already held in-house, the report will include **numerous illustrations**, and appropriate extracts from the company's **database of oil and gas fields** of the FSU.

All maps will be georeferenced and will be available in **ArcGIS format**.

This report is currently in preparation. For further details on this report, including proposed costs and timing, please visit [www.blackbourn.co.uk/reports/timan-pechora.html](http://www.blackbourn.co.uk/reports/timan-pechora.html) or contact Dr Graham Blackbourn at:

*The hydrocarbon provinces of the Timan-Pechora hydrocarbon region*
