

THE PETROLEUM GEOLOGY OF THE MIDDLE PLIOCENE OF THE SOUTH CASPIAN PROVINCE

Contents

	<u>Page</u>
VOLUME I: TEXT, APPENDICES AND FIGURES	
Chapter 1. South Caspian: Introduction and Infrastructure	
1.1 Description of the Report	1.1
1.2 Description of the Area and its Infrastructure	1.2
1.2.1 Transcaucasus	1.3
1.2.2 South Caspian Basin	1.5
1.2.3 Western Turkmenistan	1.6
1.3 History of Hydrocarbon Development in the South Caspian Province	1.7
1.4 Organisation of the Hydrocarbon Industry in the South Caspian Province	1.10
1.5 Stratigraphic Nomenclature in the South Caspian Province	1.10
1.6 Classification of Hydrocarbon Reserves	1.11
Chapter 2. Outline of the Geology and Hydrocarbons of the South Caspian and Surrounding Areas	
2.1 Azerbaijan: The Kura Basin and Adjacent Areas	2.2
2.2 Turkmenistan: The West Turkmenistan Basin and Adjacent Areas	2.3
2.3 The South Caspian Basin and the Apsheron-Prebalkhan Uplift Zone	2.7
2.4 The South Caspian Hydrocarbon Province	2.9
Chapter 3. Structural Development of the South Caspian Province.	
3.1 Structural Elements and Geological Evolution	3.1
Chapter 4. South Caspian: Stratigraphy and Sedimentological Development	
4.1 Oligocene to Early Pliocene Sedimentation in the South Caspian Province	4.1
4.2 Middle Pliocene Sedimentation and Stratigraphy	4.2
4.2.1 Depositional Environments in the Middle Pliocene	4.3
4.2.2 Productive Succession	4.6

4.2.2.1	Kusary-Divichi Trough	4.7
4.2.2.2	Apsheron Trough	4.9
4.2.2.3	Shemakha-Kobystan Trough	4.16
4.2.2.4	Talysh-Vandam Uplift and the Middle Kura Trough	4.19
4.2.2.5	Lower Kura Trough	4.21
4.2.3	Krasnotsvetnaya Succession	4.24
4.2.3.1	Apsheron-Prebalkhan Uplift Zone	4.26
4.2.3.2	Kyzylkum Trough	4.27
4.2.3.3	Gogran'dag-Okarem Step	4.28
4.2.3.4	Turkmen Step	4.28
4.3	Depositional Environments of the Krasnotsvetnaya Succession	4.29
4.4	Middle Pliocene Biostratigraphy	4.30
4.5	Middle Pliocene Petrography and Diagenesis	4.32
4.6	Post-Middle Pliocene to Recent Sedimentation and Stratigraphy	4.32

Chapter 5. Petroleum Geology of the South Caspian Province

5.1	Reservoirs, Seals and Traps	5.1
5.1.1	Reservoirs and Reservoir Quality	5.1
5.1.2	Seals	5.7
5.1.3	Traps	5.8
5.2	Source Rocks	5.8
5.3	Hydrocarbon Generation and Migration	5.9
5.4	Hydrocarbon Character and Productivity	5.13
5.5	Future Hydrocarbon Prospects within the South Caspian Province	5.14

Appendix 1. Review of Terminology and Method in Russian-Language Organic Geochemistry

1.	Introduction	I.1
2.	Organic Matter and Kerogen within Source Rocks	I.1
3.	Levels of Maturity	I.2
4.	Crude Oils	I.2
5.	Hydrocarbon Productivity of Source Rocks	I.5
	Glossary	I.6

Appendix 2. A Review of Mud Volcanism in the South Caspian Province

1. Mud Volcanoes: their General Nature and Distribution	II.1
2. The Nature of Mud-Volcano Activity	II.3
3. Theories Regarding the Origin of Mud Volcanoes	II.7
4. Relationships between Mud Volcanoes and Hydrocarbons	II.10
5. Lithological and Mineralogical Characteristics	II.12
6. The Destructive Effects of Mud Volcanoes	II.13

REFERENCES**INDEX AND GLOSSARY****MAP ENCLOSURES****VOLUME II: FIELD DATABASE**

LIST OF FIGURES

- 1.1 General location map for South Caspian Province
- 1.2 Neogene stratigraphic correlation diagram

- 2.1 Sketch map illustrating the main structural elements forming the Caspian Sea
- 2.2 Main geological structures and hydrocarbon basins of Azerbaijan
- 2.3 Schematic cross sections through sedimentary basins of Western Azerbaijan
- 2.4 Main geological structures and hydrocarbon basins of Western Turkmenistan
- 2.5 South Caspian sediment thickness
- 2.6 Interpreted seismic lines: South Caspian

- 3.1 Hypothetical plate tectonic reconstructions of the Caucasus and surrounding areas since the Cretaceous
- 3.2 Structural cross sections across the Eastern Caucasus and Transcaucasus illustrating the Pliocene to Recent development of the area
- 3.3 Plate tectonic setting of Azerbaijan as proposed by Nadirov (1985, 1990)
- 3.4 Approximately E-W crustal section through the northern part of the South Caspian Basin (Hypothetical)
- 3.5 Burial curve for the Cretaceous-Recent succession in the central zone of the South Caspian Basin

- 4.1 Generalised Middle Pliocene palaeogeography of the Central and South Caspian basins.
- 4.2 Sections of seismic lines from on and around the Apsheron Sill illustrating the base to Middle Pliocene unconformity (reflector P)
- 4.3 Log of well PRV-1 in the Central Caspian
- 4.4 General facies map of the northern part of the South Caspian Basin in the Middle Pliocene
- 4.5 Generalised thickness map of the Middle Pliocene deposits of the northern part of the South Caspian Basin, in metres
- 4.6 Stratigraphic correlation of the Productive Succession in the Apsheron area
- 4.7 Geological structure of the Kusary-Divichi Trough
- 4.8 Representative cross sections of the Kusary-Divichi Trough
- 4.9 Limits of deposition of suites around the margins of the Middle Pliocene basin

Figures 2

- 4.10 Cross section through the Productive Succession in the Southern Apsheron region
- 4.11 Thickness map for the lower sub-suite of the Kala Suite in the Gyuneshli area
- 4.12 Changes in the thickness and sand content in the lower section of the Productive Succession in the Apsheron archipelago and northern Baku archipelago
- 4.13 Thickness (m) and sand content (%) of the Productive Succession suites in the Southern Apsheron region
- 4.14 Cross sections through the Shemakha-Kobystan Trough
- 4.15 Structure map of the Shemakha-Kobystan Trough
- 4.16 Structure map of the Lower Kura Trough
- 4.17 Various systems of correlation of the Upper Productive Succession in and around the Lower Kura Trough
- 4.18 Fence diagram illustrating the distribution of various facies associations within the Lower Kura Trough and Baku archipelago, and their relationships with local stratigraphic units
- 4.19 Map of thickness and general lithofacies of the Lower Productive Succession in Azerbaijan
- 4.20 Fence diagram illustrating the lateral and vertical variation between the Apsheron and Kura "facies" in Azerbaijan
- 4.21 Stratigraphy and reservoir units of the Pliocene deposits of Turkmenistan
- 4.22 Representative well logs in the Prebalkhan uplift zone
- 4.23 Representative cross sections through the West Turkmenistan Basin
- 4.24 Schematic cross section through the Pliocene and Pleistocene of the northern shelf zone of the South Caspian Basin

- 5.1 Variations in porosity, permeability and carbonate content with depth, in over 2,500 Neogene samples from the South Caspian Province
- 5.2 Generalised variations of porosity and permeability with depth in different parts of the South Caspian Basin
- 5.3 Changes in rock density and porosity with depth in the South Caspian Basin
- 5.4 Van Krevelen diagram characterising the kerogen types of potential source rocks from the Lower Kura Trough
- 5.5 Rock-Eval pyrolysis and other geochemical data for rock fragments ejected by mud volcanoes from the South Caspian

Figures 3

- 5.6 Hydrocarbon productivity of potential Mesozoic-Cenozoic source rocks from the Lower Kura Trough
- 5.7 Plots of temperature against depth for the South Caspian Basin and other intermontane basins
- 5.8 Trend of vitrinite reflectance and source-rock maturity with depth in the South Caspian and other intermontane basins
- 5.9 Generalised Neogene burial curve for the South Caspian Basin, showing the main oil-generating window
- 5.10 Rock-Eval pyrolysis and other geochemical data for well samples from the Baku archipelago

- I.1 Catagenetic grade and level of maturity according to Russian-language terminology
- I.2 Crude oil classification after Tissot and Welte, 1978

- II.1 Distribution of the main mud volcanoes in the South Caspian Basin
- II.2 Hypothetical pressure regime at depth in sedimentary basins where mud volcanoes form
- II.3 Map and cross section of the Lokbatan mud volcano and oil field
- II.4 Seismic sections through mud volcanoes below the seabed of the central South Caspian Basin

- Enclosure 1 Oil and gas fields of Eastern Azerbaijan and adjacent areas of the Caspian Sea; 1:600,000
- Enclosure 2 Oil and Gas fields of the West Turkmenistan Basin; 1:600,000
